Managed a team of 7 to 9 developers globally, onsite, and offshore. Provided solutions for business reporting requirements for internal and external customers of Thermo King.

- Managed team activities that include allocation of work, team mentoring, tracking the progress of the work, and ensuring its completion on time.
- Set up the entire BI environment for Cognos and OBIEE.
- Worked closely with the network team for the server architecture to support a robust BI environment. Installed and configured the Cognos and OBIEE toolsets.
- Designed and implemented the complete security model to address data level and object level security for users.
- Played a key role in setting up an enterprise-wide data warehouse solution.
- Performed gap analysis on the business requirements and BI DW environment shortfalls.
- Gathered, documented, and validated business requirements and line the BI space per the requirements.
- Performed detailed analysis of source data and designed the extract transform and load strategies to load the cleaned-up data into the EDW to make it one source of truth for the data.
- Designed and documented the data mappings from source to EDW.
- Designed and developed several DAC plans to facilitate the data loads.
- Stayed cognizant of other projects and their data loads into the EDW and addressed the impact of multiple data loads into the same tables nightly.
- Re-used the existing BI DW components to satisfy business needs for data without expanding the DW BI space unnecessarily with additional components.
- Planned, designed, documented, implemented, and tested upgrades to all components of BI.
- Traveled throughout the globe to present, knowledge transfer, and train user community on a new project.
- Earned Presidents' Award for the Driving to Excellence project, and the TK Pillar of Pride for outstanding achievement, and various Bravo Awards for project accomplishments.
