Led design, development, and maintenance of architectural integration reporting solutions for the company's portfolio of internal and external data providers. Delivered best-in-class technology solutions to end-users ensuring compliance with client's change management processes and procedures.

- Created, updated, configured, and managed several Microsoft SQL Server Environments. Oversaw the implementation, configuration, security, maintenance, and performance of SQL Server RDBMS systems as well as enterprise applications.
- Maintained SQL Server database objects and performed database capacity planning, data modeling, data loads, troubleshooting, database backup, and recovery while supporting onsite applications.
- Integrated DBMS(s) and data with the existing application software, websites, portals, and storage devices/business applications.
- Tested for Disaster Recovery and Continuity of Operations Plans(COOP).
- Gathered and documented complex stakeholder requirements to create test plans to validate the development needs.
- Mentored and trained team members on development, debugging and documentation of root cause analysis and resolution.
